To Straighten Vertical Lines

In many architectural pictures, vertical lines converge inwards.
Here's how you can correct it.

1. Open documents building.jpg and building2.jpg
2. With cropping tool draw rectangle smaller than image.
3. In options bar check **Perspective**.
4. Grab the bottom handles (one at a time) and drag them outwards so they will be parallel to the vertical lines you are trying to straighten.
Then use sides and top/bottom handles to maximize selection.
5. Double click inside selection to apply cropping. Done.
